Is our spray safe?

The backyard spray is formulated using natural, plant-based ingredients that are classified by the EPA as “minimum risk pesticides.” This means the active components—such as pure cedarwood oil and lemongrass oil—are derived from natural sources and are non-toxic when used as directed. Here are a few key points that make it safe:

- **Family- and Pet-Safe:** The ingredients are specifically chosen to be non-toxic to people, pets, and even beneficial to insects like bees and butterflies.
- **EPA-Recognized:** Its classification as a “minimum risk pesticide” under EPA guidelines indicates that it poses little to no risk to human health or the environment.
- **Eco-Friendly Ingredients:** Instead of synthetic chemicals, it uses natural essential oils and inert ingredients like water, glycerin, and biodegradable emulsifiers, ensuring it breaks down naturally over time.
- **Designed for Outdoor Use:** When applied as directed, there’s no required downtime for re-entry into the treated area.

**EFFECTIVE PEST CONTROL WHILE KEEPING YOUR
BACKYARD SAFE FOR EVERYONE.**
